Steel Standing in Haiti

Metal Buildings = Staying Power

Sure, today's metal buildings look great.
But did you know they're also amazingly durable?

Because metal has a longer life cycle than wood and most other materials, it's the proven choice for robust, resilient, sturdy buildings that last.

Built to last.

After the 7.0-magnitude earthquake that devastated Port Au Prince, Haiti in January 2010, metal buildings supplied by American Buildings Company (ABC) were among the few structures left standing. Even the hurricanes that tore through Florida in 2005 did not destroy metal buildings manufactured and engineered by ABC. That's just one reason we are an authorized ABC Builder.

While you may not live in an area that's prone to earthquakes or hurricanes, you can build with the peace of mind knowing that if extreme conditions hit, your building meets the toughest building codes for your area.

On top of that, our metal standing seam roofing systems are designed to last 40-60 years—3 to 4 times longer than conventional flat roofs. They are also economical to install, extremely energy-efficient, and need only minimal maintenance.

The cool factor.

Metal buildings aren't just long lasting, they're cool. That's because the most advanced metal buildings come with "cool" coatings that reflect more of the sun's rays to produce cooler indoor temperatures. These coatings also offer superior durability and fade resistance while making your building infinitely more attractive.

ABC was the first company to switch to 100% "cool" paint systems as standard for all coated roof and wall panels. This environmentally friendly cool technology was originally developed for Stealth Aircraft in the U.S. Military. These coatings reduce heat buildup on panels not only reducing cooling costs in summer months but also significantly lengthening useful panel life.

American Buildings Company designs and manufactures more than 2,000 buildings per year. This allows us to build competitively priced, beautiful structures that have real staying power.

Call us. We'll show you how a custom metal building from American Buildings Company can meet all your facility needs and stand the test of time.
