

# New Outside Metal Closure

As an ongoing effort to improve the erectability of our products, add value, and expand services; American Buildings Company is announcing the following changes to the Standing Seam II and Standing Seam 360 Roof Panel Systems:

Current Outside Metal Closure with Required Foam Closure

New Outside Metal Closure

Effective June 29, 2015, projects with SSII or SS360 outside closure requirements will be processed using the new and improved Outside Metal Closure. This closure eliminates the need for the foam closure. In addition, this closure will be used in conjunction with Lap Stiffeners in lieu of Ridge Support Flashing at Ridge, High Side Eave and High Side Roof to Wall Conditions. These changes improve weather tightness and provide a more erector friendly installation.

Please be sure to refer to your project specific documents in the job drawings package for more detailed information.

## Our Commitment

American Buildings Company is committed to ongoing improvements in all aspects of our business. This change is intended to enhance our product offerings and improve our costs and competitiveness in the market place. Your input and comments are always greatly appreciated. If you have specific questions regarding this bulletin or any other area of our business, please contact your District Sales Manager, Customer Service Representative, or our Product Development Department.
