

Super Tall Standing Seam 360 Panel Clip

2/1/2018

American Buildings Company is constantly seeking ways to improve our product offering, add value and remain the low cost supplier for our Builders. We are pleased to announce that ABC will now be offering a super tall SS360 Roof Panel Clip. The new clip has a stand-off of 2 ½" and will allow insulation over the roof secondary member greater than 8" (R25) up to and including 12" (R38).

With this new clip it provides a more competitive cost solution (where applicable) to IMP or complex insulation systems such as liner systems, rigid board, etc. UL approval is pending and FM is not available at this time.

The installation of the system requires special attention to maintain proper panel modularity and thermal performance as noted below:

1. Ensure the insulation is permitted to sag at mid-span between purlins and expand to the full thickness of the insulation.
2. Do not pull the insulation taut as this will significantly reduce the thermal performance of the roof system.

Super Tall SS360 Clip 2 ½" Standoff

Critical Dates: The new product offering is now available and will be included in eQuote February 6, 2018. Contact your local Sales Representative for more information.

Our Commitment

American Buildings Company is committed to ongoing improvements in all aspects of our business. This change is intended to enhance our product offerings and improve our costs and competitiveness in the market place. Your input and comments are always appreciated. If you have specific questions regarding this bulletin or any other area of our business, please contact your District Sales Manager or Project Coordinator
